About Me

Hello! I'm Morad Chehresay.

I'm a Senior Full-Stack Developer with **12+ years of experience** in designing, building, and scaling complex software systems. I specialize in **PHP, WordPress, Python, and modern web technologies**.

I don't just write code — I build solutions. From custom CMS platforms and WordPress frameworks to business systems and API integrations, I deliver **practical, maintainable, and scalable software** that solves real problems and evolves with your business.

My approach combines **technical excellence** with **product thinking**. I understand that great software isn't

Experience: 12+ Years

Residence: Iran

Freelance: Available

just about clean code — it's about understanding the problem, designing the right architecture, and delivering a solution that works.

Whether it's a **custom CMS**, a **WordPress plugin**, a **CRM system**, or a **mobile application**, I focus on building **modular, future-ready systems** that your team will actually enjoy using and maintaining.

Remote: Worldwide

Languages: Persian, English

Projects: 80+ Delivered

What I Build

Web Applications

Custom PHP and Python web applications with structured backend logic, responsive interfaces, database integration and APIs.

WordPress Engineering

Custom themes, plugins, settings frameworks, admin interfaces, AJAX features, WooCommerce integrations and performance-focused solutions.

Custom CMS & Admin Panels

Modular content management systems and administration panels designed around the actual workflow of a business.

Business Systems

CRM-style systems, ticketing, reservations, dashboards, automation, customer workflows and internal business tools.

Mobile & Desktop

Android applications and desktop software, including integrations between applications, APIs and business databases.

API & Integrations

REST APIs and integrations with external services, Firebase, Supabase, payment/service APIs and real-time communication tools.

Featured Projects

A showcase of real-world projects I've designed and developed — from complex e-commerce platforms and specialized marketplaces to innovative mobile applications.

SM-CMS

Custom CMS built from scratch with PHP — from blogs and portfolios to e-commerce

PHP

Iran's steel market app — real-time prices, charts, and direct expert consultation

[Android](#)[Cordova](#)[Market](#)[View on Myket](#)

AmlakMal App

Mobile real estate platform — post listings, search properties, connect with sellers

[Android](#)[Cordova](#)[Real Estate](#)[View on Myket](#)

Why **Work** With Me?

Built from the ground up

I prefer understanding the problem first and building the right architecture instead of forcing every project into an existing template.

Full-stack thinking

I can work across the interface, backend, database, APIs, administration panel and deployment environment.

Practical engineering

My focus is maintainable code, modular systems, real business requirements and solutions that can evolve with the product.

Remote collaboration

I'm open to working with international teams on freelance, contract or long-term remote development projects.

12+ Years Experience

Over a decade of hands-on development across industries, delivering 80+ successful projects for clients worldwide.

Quality & Reliability

Clean, documented, testable code. I build systems that are easy to maintain, extend, and scale as your business grows.

Selected Work

A selection of the kinds of systems and products I develop. The portfolio is intentionally focused on engineering capability rather than decorative mockups.
